

GIFTED AND TALENTED EDUCATION

The Board of Education will provide appropriate education programs for students identified as being gifted and talented. It is recognized that all students possess unique talents and abilities and need to be challenged beyond what the basic education program can provide. Therefore, the Board supports the development and implementation of alternative programming for students identified as having unusually high levels of talent and abilities using research based procedures to identify these students.

The Board encourages teachers to enrich students within their classrooms on a regular basis. Extracurricular activities are also encouraged to enrich students.
